The sample code in this Tech Note runs in ArcestrA Synchronous Scripting mode. This code explains the following recommended practices: Insert a data row into a database table when the AppEngine's ScanCyclesCnt (built-in) attribute has a data change.

Wonderware Application Server Scripting Guide

In ArcestrA scripting, some .Net codes could fail if not using proper text encoding, and could cause a script to exit without completion. The UTF8Encoder is the default BinaryStream decoder in .Net 4.5. To enable an ArcestrA script to decode ASCII XML data, for example, insert the following snippet:
