Part of a K-5 mathematics curriculum, with curriculum units for classroom use and resources for teachers; the Investigations curriculum was developed at TERC, formerly Technical Education Research Centers.

Engineering education in K-12 classrooms is a small but growing phenomenon that may have implications for engineering and also for the other STEM subjects--science, technology, and mathematics. Specifically, engineering education may improve student learning and achievement in science and mathematics, increase awareness of engineering and the work of engineers, boost youth interest in pursuing engineering as a career, and increase the technological literacy of all students. The teaching of STEM subjects in U.S. schools must be improved in order to retain U.S. competitiveness in the global economy and to develop a workforce with the knowledge and skills to address technical and technological issues. Engineering in K-12 Education reviews the scope and impact of engineering education today and makes several recommendations to address curriculum, policy, and funding issues. The book also analyzes a number of K-12 engineering curricula in depth and discusses what is known from the cognitive sciences about how children learn engineering-related concepts and skills. Engineering in K-12 Education will serve as a reference for science, technology, engineering, and math educators, policy makers, employers, and others concerned about the development of the country's technical workforce. The book will also prove useful to educational researchers, cognitive scientists, advocates for greater public understanding of engineering, and those working to boost technological and scientific literacy.

This book represents a set of critical analyses of educational reforms where issues of transnational governance are of vital concern. It focuses on different aspects of, and practices in educational reform-making, and in particular on governing techniques and the working of new agencies such as supranational and multinational organizations. In addition, the book examines contemporary issues of immigration/immigrants in the politics of schooling, by reflecting on matters of migration, and problematizing how concepts such as exclusion and abjection make the migrants appear failed, insufficient and even dangerous. The book provides theoretical insights into critical relations between knowledge and power, governance and governmentality, and notions concerning educational systems, as well as how these are compared. The central themes of the book are models for organizing and reflecting on transnationalization and educational reforms. In its discussion of those themes, the focus lies on changing conceptions of education and the educational system; on how school or teacher education is adapting to discourses of effectiveness and efficiency; and on their transformation according to standardized templates. Such changing conceptions define the meanings of education and educational progress; they are important for the identification and analysis of educational knowledge, and for critical discourses on education in society.
