For a Lie group G with the Lie algebra \mathfrak{g} , $\text{Ad} : G \rightarrow \text{GL}(\mathfrak{g})$ is the adjoint representation taking $x \in \mathfrak{g}$ to $\text{Ad}_x \in \text{GL}(\mathfrak{g})$, and its image, the adjoint group, is denoted $\text{Ad}G$. If $H \leq G$ then $\text{Ad}G(H)$ is the image of H under Ad and where is no risk of confusion we will simply write $\text{Ad}(H)$. The Lie algebra representation $\text{ad} : \mathfrak{g} \rightarrow \mathfrak{gl}(\mathfrak{g})$ takes a vector X to $\text{ad}X \in \mathfrak{gl}(\mathfrak{g})$.

Lie theory. In mathematics, the researcher Sophus Lie (/ ?li? / LEE) initiated lines of study involving integration of differential equations, transformation groups, and contact of spheres that have come to be called Lie theory. For instance, the latter subject is Lie sphere geometry.

This volume provides a comprehensive treatment of basic Lie theory, primarily directed toward graduate study. The text is ideal for a full graduate course in Lie groups and Lie algebras. However, the book is also very usable for a variety of other courses: a one-semester course in Lie algebras, or on Haar measure and its applications, for advanced undergraduates or as the text for one-semester graduate courses in Lie groups and symmetric spaces of non-compact type, or in lattices in Lie groups.

Lie theory is by no means simple. To grasp a minimum idea of what LT can be, we may consider the following three references. First, Abbaspour's "Basic Lie theory" [1] comprises more than 400 pages. With a similar title, Howe's "Very basic Lie theory" [2] comprises 24 (dense) pages, and is sometimes considered a must-read introduction. Finally,

They provide the means to translate global problems into infinitesimal ones and to lift infinitesimal solutions to local ones.

This chapter is devoted to the subject proper of this book: Lie groups, defined as smooth manifolds with a group structure such that all structure maps (multiplication and inversion) are smooth. Here we use vector fields to build the key tools of Lie theory. The Lie functor which associates a Lie algebra with a Lie group and the exponential function from the Lie algebra to the Lie group.
