Iguanodon, first described by Gideon Mantell on the basis of fragments discovered in England in 1824, was initially reconstructed as an iguana-like reptile or a heavily built, horned quadruped. However, the Bernissart skeleton changed all that.

Bernissart Dinosaurs and Early Cretaceous Terrestrial ...

Focusing on the Bernissart discoveries, Bernissart Dinosaurs and Early Cretaceous Terrestrial Ecosystems presents the latest research on Iguanodon and other denizens of the Cretaceous ecosystems of Europe, Asia, and Africa. Pascal Godefroit and contributors consider the Bernissart locality itself and the new research programs that are underway there.

Bernissart Dinosaurs and Early Cretaceous Terrestrial ...

Information on the structure of the brain of the basal iguanodontian dinosaursIguanodon bernissartensisandMantellisaurus atherfieldensis, from the Early Cretaceous of Bernissart, is presented on the basis of computed tomographic scanning and 3D reconstruction of three braincases. The resulting digital cranial endocasts are compared with physical and digital endocasts of other dinosaurs.

Bernissart Dinosaurs and Early Cretaceous Terrestrial ...

The Sainte-Barbe Clays Formation is a geological formation in Belgium. It is found in localised areas of the northern margin of the Mons Basin, alongside the equivalently aged Hautrage and Baudour Clay Formations. It is Upper Barremian-Lower Aptian in age. It predominantly consists of laminated clay, with some lignite. It is well known for the "Iguanodon sinkhole" locality near Bernissart where many specimens of Iguanodon bernissartensis were discovered by Louis Dollo in the late 19th century.

Sainte-Barbe Clays Formation - Wikipedia

Mantellisaurus is a genus of iguanodontian dinosaur that lived in the Barremian and early Aptian ages of the Early Cretaceous Period of Europe. Its remains are known from Belgium (Bernissart), England, Spain and Germany. The type and only species is *M. atherfieldensis*.
