In Beyond the Score: Music as Performance, author Nicholas Cook supplants the traditional musicological notion of music as writing, asserting instead that it is as performance that music is loved, understood, and consumed. This book reconceives music as an activity through which meaning is generated in real time, as Cook rethinks familiar assumptions and develops new approaches. Focusing primarily but not exclusively on the Western 'art' tradition, Cook explores perspectives that range from close listening to computational analysis, from ethnography to the study of recordings, and from the social relations constructed through performance to the performing (and listening) body. In doing so, he reveals not only that the notion of music as text has hampered academic understanding of music, but also that it has inhibited performance practices, placing them in a textualist straightjacket. Beyond the Score has a strong historical emphasis, touching on broad developments in twentieth-century performance style and setting them into their larger cultural context. Cook also investigates the relationship between recordings and performance, arguing that we do not experience recordings as mere reproductions of a performance but as performances in their own right. Beyond the Score is a comprehensive exploration of new approaches and methods for the study of music as performance, and will be an invaluable addition to the libraries of music scholars-including musicologists, music theorists, and music cognition scholars-everywhere.

This book interprets the music theory of Henrich Schenker (1868-1935) as part of a comprehensive project encompassing not just musical reform but social and political critique. It sets his work into the contexts of Viennese modernism, German cultural conservatism, and Schenker's position as a Jewish immigrant to the city where modern anti-semitism first developed.

"Put briefly, this is a superb collection of essays. They are lucidly and eloquently written, and make their points with wit and clarity. They are full of perceptive, highly stimulating, and occasionally provocative illustrations of how practice connects to theory (and vice versa) without getting bogged down in academic language. The contributors include a combination of exceptionally admired film music scholars, and of musicologists renowned for their keen insights into the cultural contexts of music production and reception. This book is an excellent resource and compelling read."-Derek B. Scott, author of *From the Erotic to the Demonic: On Critical Musicology*

There have been several scientific books and lecture papers written on the subject of our holographic universe but none have gone far enough as to expand peoples thinking and explain the true nature of reality. Music is a natural consequence of the pure mathematics within nature. Music is a true universal language as Music is vibrational physics and mathematics that is a language understood by the human mind. The silent music of the universe or Aether Physics from the RG Veda is the only ONE science that explains the true perfection of creation and our connection to the holographic universe.Quantum Metrics are from the RG Veda: Quantum Physicist already knowing the answer as they have taken it the RG Veda then creates complicated elongated mathematical equations to derive at their Metric, which they name after themselves. I explain how to calculate all 90 metrics contained in RG Veda using a dividend and divisor and how to apply this system of harmony to devices you can manufacture such as electric motors. I would not dare name any of the yet "undiscovered" Metrics after myself, as no man should claim Gods work as his own.Although I have examples of the RG Vedas and other sources mentioning the Vedic Meter no one to my knowledge as given a full interpretation of them and what they relate to as I have done. I have deciphered and attempted to simplify one of the most ancient of mysteries and show how to apply it. My intention in releasing this information is to enlighten humanity as to assist in the rebuilding of the foundations of science for the advancement of all. We all must aspire to a brighter future and not allow this information to remain the industrial secret of occult societies.These societies have handicapped humanity for long enough and it is time to enter into the light from the darkness and advance our civilization. The zenith is the point in the sky or celestial sphere directly above an observer. God, sees all life in all dimensions and knows all of us, we should all strive for Krzna Consciousness and free ourselves from the illusion of our material world. When there is harmony between the mind, heart and resolution then nothing is impossible.

Where is the academic study of music today, and what paths should it take into the future? Should we be looking at how music relates to society and constructs meaning through it, rather than how it transcends the social? Can we ‘remix’ our discipline and attempt to address all musics on an equal basis, without splitting ourselves in advance into subgroups of ‘musicologists’, ‘theorists’, and ‘ethnomusicologists’? These are some of the crucial issues that Nicholas Cook has raised since he emerged in the 1990s as one of the UK’s leading and most widely read voices in critical musicology. In this book, collaborators and former students of Cook pursue these questions and others raised by his work—from notation, historiography, and performance to the place of music in multimedia forms such as virtual reality and video games, analysing both how it can bring people together and the ways in which it has failed to do so.
