

## Big Ideas Math Probability Answers

If you ally dependence such a referred **big ideas math probability answers** ebook that will give you worth, get the utterly best seller from us currently from several preferred authors. If you desire to droll books, lots of novels, tale, jokes, and more fictions collections are plus launched, from best seller to one of the most current released.

You may not be perplexed to enjoy every book collections big ideas math probability answers that we will extremely offer. It is not going on for the costs. It's virtually what you infatuation currently. This big ideas math probability answers, as one of the most functioning sellers here will definitely be in the course of the best options to review.

EXAMPLE 2 Finding a Probability You roll the number cube. What is the probability of rolling an odd number?  $P(\text{event}) = \frac{\text{number of favorable outcomes}}{\text{number of possible outcomes}}$   $P(\text{odd}) = \frac{3}{6} = \frac{1}{2}$  Simplify. The probability of rolling an odd number is  $\frac{1}{2}$ , or 50%. There are 3 odd numbers (1, 3, and 5). There is a total of 6 numbers. EXAMPLE 3 Using a Probability

388 Chapter 9 Probability 1. VOCABULARY Is rolling an even number on a number cube an outcome or an event? Explain. 2. REASONING Can the probability of an event be 1.5? Explain. 3. OPEN-ENDED Give a real-life example of an event that is impossible. Give a real-life example of an event that is certain.  $9 + (-6) = 3$   $3 + (-3) = 4$   $4 + (-9) = 9$   $9 + (-1) =$

*9.1 Introduction to Probability - Big Ideas Learning*

The probability of the student guessing exactly two correct answers is  $\frac{3}{8}$ , or 37.5%. The sum of the probabilities of all outcomes in a sample space is 1. So, when you know the probability of event A, you can find the probability of the complement of event A. The complement of event A consists of all outcomes that are not in A and is

The bar graph shows 10 ones, 8 threes, and 11 ? ves. So, an odd number was rolled  $10 + 8 + 11 = 29$  times in a total of 50 rolls.  $P(\text{event}) = \frac{\text{number of times the event occurs}}{\text{total number of trials}}$ .  $P(\text{odd}) = \frac{29}{50}$ . The experimental probability is  $\frac{29}{50}$ , 0.58, or 58%.

The probability of choosing a vowel is  $\frac{3}{7}$  or about 43%. There are 3 vowels. There is a total of 7 letters. EXAMPLE 2 Using a Theoretical Probability The theoretical probability that you randomly choose a green marble from a bag is  $\frac{3}{8}$ . There are 40 marbles in the bag. How many are green?  
 $P(\text{green}) = \frac{\text{number of green marbles}}{\text{total number of marbles}}$

Determine whether events are independent events. Find probabilities of independent and dependent events. Find conditional probabilities. Determining Whether Events Are Independent. Two events are independent events when the occurrence of one event does not affect the occurrence of the other event.

## *10.2 Independent and Dependent Events - Big Ideas Learning*

To find the probability that the diagnosis is correct, follow the branches leading to event B.  $P(B) = P(A \text{ and } B) + P(A \text{ — and } B)$  Use tree diagram.  $= P(A) \cdot P(B|A) + P(A \text{ —}) \cdot P(B|A \text{ —})$  Probability of dependent events  $= (0.083)(0.98) + (0.917)(0.95)$  Substitute.  $\approx 0.952$  Use a calculator.
