Diagnosis and Treatment of Substance Abuse follows the D.E.C.L.A.R.E model of treatment--a model in which each letter represents one of the seven bio-psychosocial modalities, or points of entry, for viewing the problems of a dependent client. This model takes the student through every phase of the acronym, which employs a therapeutic approach aimed at facilitating the improvement of drug-abusing behavior. Throughout the text, the student is provided with helpful suggestions regarding treatment impasses, assessing strengths and weaknesses, developing a treatment plan and prioritizing intervention strategies. Transcripts from actual sessions and case vignettes provide rich clinical material to the text. Also, the student/clinician is provided with actual clinical instruments, not seen in other books, to conduct assessment evaluations of clients.
