The results of recent archaeological excavation, systematic rural survey and detailed studies of pottery distributions have revealed the extent and complexities of the economy in the eastern empire. The eight papers in this volume demonstrate this complexity and prosperity, examining several types of product and how the economy evolved over time. Contents: New Rome, new theories on Inter-regional exchange: East Mediterranean economy in Late Antiquity ( Sean Kingsley and Michael Decker ); Urban Economies of Late Antique Cyrenaica ( Andrew Wilson ); The economic impact of the Palestinian wine trade in Late Antiquity ( Sean Kingsley ); Food for an empire: wine and oil production in North Syria ( Michael Decker ); Beyond the amphora: non-ceramic evidence for Late Antique industry and trade ( Marlia Mundell Mango ); The economy of Late Antique Cyprus ( Tassos Papacostas ); LR2: a container for the military annona on the Danubian border? Experimental Thermodynamics, Volume II: Experimental Thermodynamics of Non-reacting Fluids focuses on experimental methods and procedures in the study of thermophysical properties of fluids. The selection first offers information on methods used in measuring thermodynamic properties and tests, including physical quantities and symbols for physical quantities, thermodynamic definitions, and definition of activities and related quantities. The text also describes reference materials for thermometric fixed points, temperature measurement under pressures, and pressure measurements. The publication takes a look at absolute measurement of volume and equation of state of gases at high temperatures and low or moderate temperatures. Discussions focus on volumes of cubes of fused silica, density of water, and methods of measuring pressure. The text also examines the compression of liquids and thermodynamic properties and velocity of sound, including thermodynamics of volume changes, weight methods, and adiabatic compression. The selection is a dependable reference for readers interested in the thermophysical properties of fluids.

In December 1903 a British army marched over the Himalayas to counter a non-existent Russian threat and was confronted by a medieval Tibetan army ordered to stop it by non-violent means. It was a clash between the mightiest political power in the world and the weakest. Leading the mission was the charismatic Francis Younghusband. Commanding the army escort was an officer determined to do things by the book: General James Macdonald. The result was conflict at every level. Drawing on diaries, letters and unpublished first-hand accounts, Charles Allen reveals not only the true character of one of Britain's great imperial heroes but also the calamitous outcome for the Tibetan people of Britain's last attempt at empire-building.

The shock Syrian attack caught the Israelis by surprise and by the afternoon of 7 October a Syrian brigade was less than 10km from the Sea of Galilee. Simon Dunstan describes in detail how amid desperate and bitter fighting the Israeli forces managed to turn the tide on the Golan Heights.
