World in the 21st century appears to be sinking into chaos, hatred, and irrationality. Yet Steven Pinker shows that this is an illusion - a symptom of historical amnesia and statistical fallacies. If you follow the trendlines rather than the headlines, you discover that our lives have become longer, healthier, safer, happier, more peaceful, more stimulating and more prosperous - not just in the West, but worldwide. Such progress is no accident: it's the gift of a coherent and inspiring value system that many of us embrace without even realizing it. These are the values of the Enlightenment: of reason, science, humanism and progress. The challenges we face today are formidable, including inequality,

Humanism, Artificial Intelligence and nuclear weapons. But the way to deal with them is not to sink into despair or try to lurch back to a mythical idyllic past; it's to treat them as problems we can solve, as we have solved other problems in the past. In making the case for an Enlightenment newly recharged for the 21st century, Pinker shows how we can use our faculties of reason and sympathy to solve the problems that inevitably come with being products of evolution in an indifferent universe. We will never have a perfect world, but - defying the chorus of fatalism and reaction - we can continue to make it a better one.

World has been getting worse off, that violence is on the rise, or that humanity has already "peaked" then this book will challenge everything you've been feeling. Delve deep into the world of data where Pinker presents rock-solid arguments for the betterment of humanity as a whole. Steven Pinker wants to prove that we are living in a world that is better off than it has ever been, and it will only continue to get better. In Enlightenment Now, Pinker argues that the best tools we have come from the 18th century ideals of reason, science, progress and humanism, and we can leverage them in very 21st century ways by using data to tell the story of our modern world. About the Original Book: Enlightenment Now is Steven Pinker's love letter to the Enlightenment. Knowledge, he argues, is our best tool against the traps set by atrophying political parties, salacious media, and theocratic social norms. With reason, science, and humanism—the foundational principles of the

Enlightenment—and our modern ways of measuring progress by way of data, Pinker elegantly proves that the world is in a better place than it used to be, and things will only keep getting better so long as we stay committed to those principles that have served us and still do.

A bestselling author, neuroscientist, and computer engineer unveils a theory of intelligence that will revolutionize our understanding of the brain and the future of AI. For all of neuroscience's advances, we've made little progress on its biggest question: How do simple cells in the brain create intelligence? Jeff Hawkins and his team discovered that the brain uses maplike structures to build a model of the world-not just one model, but hundreds of thousands of models of everything we know. This

discovery allows Hawkins to answer important questions about how we perceive the world, why we have a sense of self, and the origin of high-level thought. A Thousand Brains heralds a revolution in the understanding of intelligence. It is a big-think book, in every sense of the word.

“The Knowledge Illusion is filled with insights on how we should deal with our individual ignorance and collective wisdom.” —Steven Pinker We all think we know more than we actually do. Humans have built hugely complex societies and technologies, but most of us don't even know how a pen or a toilet works. How have we achieved so much despite understanding so little? Cognitive

scientists Steven Sloman and Philip Fernbach argue that we survive and thrive despite our mental shortcomings because we live in a rich community of knowledge. The key to our intelligence lies in the people and things around us. We're constantly drawing on information and expertise stored outside our heads: in our bodies, our environment, our possessions, and the community with which we interact—and usually we don't even realize we're doing it. The human mind is both brilliant and pathetic. We have mastered fire, created democratic institutions, stood on the moon, and sequenced our genome. And yet each of us is error prone, sometimes irrational, and often

Ignorant. The fundamentally communal nature of intelligence and knowledge explains why we often assume we know more than we really do, why political opinions and false beliefs are so hard to change, and why individual-oriented approaches to education and management frequently fail. But our collaborative minds also enable us to do amazing things. The Knowledge Illusion contends that true genius can be found in the ways we create intelligence using the community around us.

Humanism writes an elegant assessment of the human race's condition during the third millennium in his book *Enlightenment Now: The Case for Reason, Science, Humanism, and Progress*. In this book, Pinker urges his readers to step back and look away from the gory news headlines that we see every day and the prophecies of doom that come with them. According to Pinker, this plays a big role in how we form our psychological biases. What he advises instead is to follow the data. In presenting the seventy-five jaw-dropping graphs, Steven Pinker showed that health, life, safety, prosperity, knowledge, peace, and happiness are actually on the rise. It's not only evident in the West, but also worldwide. Pinker

Darwin must rank as one of the

Its full title is *The Origin of Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life*, in some editions prefaced by the word "On." Darwin describes the book as simply an "abstract" of his ideas, which are more fully fleshed out and supported with detailed examples in his other, more scholarly works (for example, he wrote several long treatises entirely about barnacles). *The Origin of Species* itself was intended to reach a wider audience and is written in such a way that any reasonably educated and thoughtful reader

can follow Darwin's argument that species of animals and plants are not independent creations, fixed for all time, but mutable. Species have been shaped in response to the effects of natural selection, which Darwin compares to the directed or manual selection by human breeders of domesticated animals. The Origin of Species was eagerly taken up by the reading public, and rapidly went through several editions. This Standard Ebooks edition is based on the sixth edition published by John Murray in 1872, generally considered to be the definitive edition with many amendments and updates by Darwin himself.
