Equine Nutrition and Feeding Pdf Download. The preparation of this edition entailed the careful reading of the previous edition and with it the embarrassing discovery of a few errors, including one or two in equations, which I have now corrected. It has been necessary to revise all chapters and other sections, some to a greater extent than others. The increased understanding of gastrointestinal tract function has led to a considerable number of changes to Chapters 1 and 2.

Horses are non-ruminant herbivores of a type known as a "hindgut fermenter." Horses have only one stomach, as do humans. However, unlike humans, they also need to digest plant fiber that comes from grass or hay. Ruminants like cattle are foregut fermenters, and digest fiber in plant matter by use of a multi-chambered stomach, whereas h

horse rations; and the digestion of feeds. Chapters 5-10 cover concise, up-to-date summaries on macro- and micronutrients, including vitamins, minerals, protein, and water. The book goes on, examining the important interrelationships between nutrition, disease, and performance; the relative value of various feeds in horse rations; and the value of pasture and hay for horses. Chapters 15-18 focus on feeding the foal, growing horses; the performance and race horses; and the mares and stallions. The final chapters discuss purified rations for horses, antibiotics, founder, learning ability, feeding behavior, nutrient toxicity, weight equivalents, weight-unit conversion factors,

the nutrients your horse needs.

Proper formulation of diets for horses depends on adequate knowledge of their nutrient requirements. These requirements depend on the breed and age of the horse and whether it is exercising, pregnant, or lactating. A great deal of new information has been accumulated since the publication 17 years ago of the last edition of *Nutrient Requirements of Horses*. This new edition features a detailed review of scientific literature, summarizing all the latest information, and provides a new set of requirements based on revised data. Also included is updated information on the composition of feeds, feed

updated feed evaluation systems based on net energy, global amount of amino acids, and feed intake. These systems allow accurate comparison of the nutritive value of feeds, the formulation of well-balanced rations to achieve production or utilisation goals, and the prediction of equine performance based on the quantity and quality of the ration. 'Equine nutrition' provides an update of the nutrient requirements for all categories of equine. Tables of recommended allowances based on long term feeding trials carried out at INRA are proposed. These recommendations and the simple approach to formulation of rations based on the use of a maximum amount of forage have been

and farming management. This book is an essential source for scientists, teachers and their students, advisers and professionals.

Forages should be the basis of all diets in horse feeding. Therefore it is of major importance to determine which parameters will influence their quality. Changes on chemical composition along the vegetative cycle, nutrient losses during harvesting, preservation and storage are factors that could have an effect on nutritive value, as well on digestibility and palatability. A specific grazing and ingesting behaviour, linked to plant preferences and the selection of feeding sites will have an impact
