Palm oil is everywhere today: in food, soap, lipstick, even newspaper ink. It's been called the world's most hated crop because of its association with deforestation in Southeast Asia. But despite ...

There has been a profound change within the sphere of government and societal regulation in recent years. Traditional hierarchical government has been challenged by new governance instruments relying on negotiations instead of command and control. Alongside this development there has been a change in the time-framing of politics and steering. Traditional politics implicitly has been based on stability and permanence while new forms of governance explicitly are based on just-in-time actions such as projects and issue-based collaborations in networks and programs. This book analyses the implications of this shortening of time frames, focusing particularly on spatial policy interventions. Spatial policies have a special relevance when it comes to governance and new forms of societal steering. On the one hand, the local (geographical) level in politics is the principal battleground for the struggle between top down and bottom up approaches and aspirations. On the other hand, many of the most burning issues of our time require a global, strategic approach, for example, climate change, resource depletion, population growth are anchored in space and the physical world. Whether and how short-term spatial approaches can achieve sustainable development outcomes is thus a critical question, and forms the focus of this volume. The book examines the characteristics of temporary policy measures across a range of rural, urban and regional contexts, in four continents: Europe, North America, Oceania and Africa. The outcomes and effects of these policies and interventions are analysed, particularly focusing on the tension between short-term interventions and long-term effects.

This Review of Venice, Italy, offers a comprehensive assessment of the city-region's economy and the extent to which its land use, labour market and environmental policies embrace a metropolitan vision.

This book is one of the main outcomes of the projects "Development Programmes and Rural Change in the European Union: governance, results and lessons to share" and "Successes and failures in the practice of neoendogenous rural development in the European Union (1991-2013)", funded both of them by the Spanish Ministry of Economy and Competitiveness. This publication aims, on one side, to clarify and deepen the knowledge of the social, economic and territorial effects of the LEADER approach, and, on the other, to analyze the importance of the participation of several stakeholders (young people and women) as well as some traditional activities -agriculture- or modern ones (tourism) linked all of them to the rich cultural and natural heritage of these areas. It also provides an in-depth study of the causes that lead to the generation of successful projects in the practice of neoendogenous rural development and also explores the reasons that cause certain projects to fail in the path towards LEADER support so that they are finally not implemented. In addition, it is shown the problems, results and best practices that cause the neoendogenous rural development in different areas inside of the European Union: Austria, Finland, France, Germany, Italy, Spain and United Kingdom. Thereby it helps to improve the decision-making in rural development, both on a local and regional scale. The multidisciplinary and international character of the authors, as well as the specificity of the research trajectory of each of them, in the analysis of rural development, enriches the publication and facilitates the different and critical reflections on the contributions, errors and meaning of the neoendogenous local development. Researchers in this discipline and technicians working in the practice of rural development along the European Union are the main audience of the book.

This book examines the economic impacts of government investments in renewable energy on rural areas and how such investment can bring the greatest benefit to those areas.

This book highlights scientific achievements in the key areas of sustainable electricity generation and green building technologies, as presented in the vital bi-annual World Renewable Energy Network's Med Green Forum. Renewable energy applications in power generation and sustainable development have particular importance in the Mediterranean region, with its rich natural resources and conducive climate, making it a perfect showcase to illustrate the viability of using renewable energy to satisfy all energy needs. The papers included in this work describe enabling policies and offer pathways to further develop a broad range of renewable energy technologies and applications in all sectors - for electricity production, heating and cooling, agricultural applications, water desalination, industrial applications and for the transport sector.

This volume contains a selection of papers presented at the second workshop on Evaluation and Planning held at Centre International de Hautes Etudes Agronomiques Mediterraneennes (CIHEAM) in Valenzano (Bari) in November 1993. The workshop was financially and otherwise supported by the School of Engineering, Bari Polytechnic; the School of Agriculture, University of Bari; and CIHEAM. The publication of this book was made possible by the efforts of the contributing authors. Several other persons have provided invaluable support for the workshop or the preparation of this volume. One of these is Patsy Healey for her fascinating challenge to Andreas Faludi's most recent arguments about rational planning theory. Another is John Friedmann whose lecture at the workshop presented world future scenarios depicting interaction between economic growth, social justice and ecological balance. Angela Barbanente provided marvelous support in organizing the workshop and editorial advice in the preparation of this volume. Jeremy Franks carefully improved the English and the clarity of all the papers. Carmelo Torre made a final editing of texts and images. We owe thanks to Maurizio Raeli for providing all the support

services during the workshop and Claudia Baublys for her excellent help with various administrative issues with regard to the workshop and publication of this book. This book is dedicated to the memory of Professor Giovanni Grittani, Professor of Land Economics, University of Bari.

The five volume set LNCS 10960 until 10964 constitutes the refereed proceedings of the 18th International Conference on Computational Science and Its Applications, ICCSA 2018, held in Melbourne, Australia, in July 2018. Apart from the general tracks, ICCSA 2018 also includes 34 international workshops in various areas of computational sciences, ranging from computational science technologies, to specific areas of computational sciences, such as computer graphics and virtual reality. The total of 265 full papers and 10 short papers presented in the 5-volume proceedings set of ICCSA 2018, were carefully reviewed and selected from 892 submissions. The paper Nitrogen Gas on Graphene: Pairwise Interaction Potentials is available open access under a Creative Commons Attribution 4.0 International License via [link.springer.com](http://link.springer.com).

This book combines urban planning and architectural tools in an attempt to overcome the limitations of sectoral measures. In this perspective, it offers a forum for the debate of different approaches used by schools of planning and architecture. It explores strategies by drawing from the potential contributions of cognitive models for decisions, the role of utopian thinking and retrofitting actions and their interconnectedness, the role of cultural legacy for urban and landscape design, the design perspectives about public spaces, and the role of architecture design and urban and regional planning for landscape quality. The book also discusses on design as a process of decision-making that operates as an act of empathy that aligns with human and ecological values - emotional, physical and socio-cultural. Each planning and design act has different possible effects able to help making clear strategic and local actions, contributing to community empowerment and to landscape and local governance. Design activity along the river and multiple experiences (design processes, urban fringe design, agri-urban models, river parks, UNESCO sites, River Contracts, greenbelts and ecological networks), through reflection on design roles, helping to understand the design process and its results at different scales. Roberta Ingaramo, architect, PhD, is Assistant Professor in Architectural and Urban Design, Department of Architecture and Design (DAD), Polytechnic University of Turin (Italy), Master in Conservation of Historic Towns and Buildings, Katholieke Universiteit (Belgium). [roberta.ingaramo@polito.it](mailto:roberta.ingaramo@polito.it) Angioletta Voghera, architect, PhD, is Associate Professor of Urban and Regional Planning, Inter-university Department of Urban and Regional Studies and Planning (DIST), Polytechnic University of Turin (Italy). Lo sviluppo locale di una comunità e di un territorio non si realizza solo per effetto della acquisizione e della concentrazione delle risorse economiche per sostenere e alimentare un macro sistema di Welfare, ma anche e soprattutto per ampliare le possibilità per una comunità di accedere a più diffuse opportunità di Wellbeing. Al centro ci sta, quindi, il "sentirsi bene" della persona, che amplia e potenzia le sue relazioni, intensifica la sua comunicazione con la comunità in cui si riconosce, orienta e in un certo senso adatta e specializza le sue abilità che gli consentono di partecipare ai sistemi strumentali della vita sociale, che vanno dalla produzione di beni e servizi alla produzione di loisir. Diviene di conseguenza centrale una nozione di "sviluppo locale" in cui i sistemi di relazioni intersoggettive, la reciprocità delle prestazioni incentrate sui bisogni e non sullo scambio, la conoscenza acquisita attraverso i percorsi della istruzione e della formazione, la comunicazione mediata non solo dai beni strumentali ma anche da simboli e riti, divengono fattori essenziali di empowerment delle dinamiche della inclusione e della integrazione sociale. Lo sviluppo locale consente la individuazione delle aree di vulnerabilità e di decomposizione del tessuto sociale, e al tempo stesso i fattori culturali, relazionali, anche simbolici che facilitano ed accelerano la integrazione di soggetti a rischio di marginalità e di esclusione sociale. Everardo Minardi Docente di sociologia dello sviluppo presso la Università di Teramo, coordinatore del PHD Course in Sociology of Regionale and Local Development, con la Università di Zadar (Croatia) Nico Bortoletto Docente di metodologia e tecniche della ricerca sociale, presso la Università di Teramo, docente presso PHD Course in Sociology of Regionale and Local Development, con la Università di Zadar (Croatia)
