A characteristic common to groups that experience health inequities—such as poor or marginalized persons, racial and ethnic minorities, and women—is lack of political, social or economic power. Thus, to be effective and sustainable, interventions that aim to redress inequities must typically go beyond remedying a particular health inequality and also help empower the group in question through systemic changes, such as law reform or changes in economic or social relationships.

WHO | Equity - World Health Organization

Aristotle ' s formal theory of distributive justice makes the distinction between vertical and horizontal equity: horizontal equity refers to equity between people with the same health care needs, whilst vertical equity refers to those with unequal needs who should receive different or unequal health care. [18] i) Vertical equity – is the unequal treatment of unequals and can be justified on the basis of morally relevant factors, however, morally irrelevant factors should not be the basis ...

Equality vs. Equity. The difference between equality and equity must be emphasised. Although both promote fairness, equality achieves this through treating everyone the same regardless of need, while equity achieves this through treating people differently dependent on need. However, this different treatment may be the key to reaching equality.
