Hearing: Frequency and Volume. Launch Gizmo. Test your hearing range by listening to low-, medium-, and high-frequency sounds. Compare the relative loudness of sounds at each frequency to create an equal-loudness curve. In a quiet room, measure your threshold of audibility for each frequency, and compare your results to others.

Hearing: Frequency and Volume Gizmo : Lesson Info ...

Compare the relative loudness of sounds at each frequency to create an equal-loudness curve. In a quiet room, measure your threshold of audibility for each frequency, and compare your results to others. The volume of each sound can be adjusted. Time's Up! As a guest, you can only use this Gizmo for 5 minutes a day.

Hearing: Frequency and Volume Gizmo : ExploreLearning

The Hearing: Frequency and Volume Gizmo allows you to test how well you hear tones at different frequencies. The frequency of a sound wave is measured in hertz (Hz), where 1 Hz is equal to one wave passing each second. Frequency is related to the pitch of a sound, or whether it sounds high (like a whistle) or low (like a tuba).
