Information modelling and knowledge bases are now essential, not only to academics working in computer science, but also wherever information technology is applied. This book presents papers from the 26th International Conference on Information Modelling and Knowledge Bases (formerly the European Japanese Conference - EJC), which took place in Tampere, Finland, in June 2016.

*Information modelling and
knowledge bases XXI: Preface*

Information modelling is becoming more and more important topic for researchers, designers, and users of information systems. The amount and complexity of information itself, the number of abstraction levels of information, and the size of databases and knowledge bases are continuously growing. Conceptual modelling is one of the sub-areas of information modelling.

In this paper recent research is presented, focused on the development and application of an information-based model that aims to capture formally the explicit and implicit aspects of knowledge. The model is informed by the empirical study of real-life interaction.

The DIKW pyramid, also known variously as the DIKW hierarchy, wisdom hierarchy, knowledge hierarchy, information hierarchy, and the data pyramid, refers loosely to a class of models for representing purported structural and/or functional relationships between data, information, knowledge, and wisdom. "Typically information is defined in terms of data, knowledge in terms of information, and wisdom in terms of knowledge". Not all versions of the DIKW model reference all four components, and some i
