Marks (1999) suggests nurses choose to see only perceived physical symptoms of pain, when listening to individuals should be an option. Nurses need to know about the various assessment strategies to make an informed care choice. They need to be aware of how their own attitudes may inhibit their understanding of another individual's experience.

Therapeutic listening. Listening to a patient describe symptoms demands a nurse's full attention and concentration, which can be difficult in a busy clinical environment. However, only by listening actively can nurses understand patients' interpretations of their experience. Through listening, nurses also communicate empathy.
