COVID-19's hematologic impact

Advances in blood disorders research continue despite COVID-19

Lymphoma is a blood cancer that affects the lymphatic system. The lymphatic system is a large part of the immune system. Other diseases may be more difficult to fight off after development of lymphoma, and fighting the disease itself becomes increasingly difficult as the immune system is compromised. In 2013, over 731,000

You've probably heard of lymphoma, the most common type of blood cancer, and you've likely heard of non-Hodgkin lymphoma — but have you heard of follicular lymphoma (FL)? It's a slow-growing, typically incurable blood cancer and the most common form of indolent non-Hodgkin lymphoma, accounting for about 20% of all cases in the United States. FL can be diagnosed at any age but is more common ...
