International Economics, 13th Edition provides students with a comprehensive, up-to-date review of the field's essential principles and theory. This comprehensive textbook explains the concepts necessary to understand, evaluate, and address the economic problems and issues the nations of the world are currently facing, and are likely to face in the future. Balancing depth and accessibility, the text helps students identify the real-world relevance of the material through extensive practical applications and examples. The new, thoroughly-updated and expanded edition provides students with a solid knowledgebase in international trade theory and policy, balance of payments, foreign exchange markets and exchange rates, open-economy macroeconomics, and the international monetary system. The text uniquely employs the same graphical and numerical model in chapters that cover the same basic concept, allowing students to recognize the relationship among the different topics without having to start with a new example each time. Clear, straightforward discussions of each key concept and theory are complemented by concrete, accessible, and relatable examples that serve to strengthen student comprehension and retention. Topics include the "Great Recession," the increase in trade protectionism, excessive volatility and large misalignments of exchange rates, and the impacts of resource scarcity and climate change to continued growth and sustainable development.

Dominick Salvatore once again offers you an opportunity to provide an international perspective to your managerial economics course in his latest edition of the popular Managerial Economics in a Global Economy. Despite multiple efforts on the bilateral, regional and multilateral level to create uniform or at least harmonized rules for commercial operations and practices in the maritime transport sector and to liberalize maritime transport services by tearing down the barriers that exist in that sector, there is until today no global regime regulating (or rather deregulating) the supply of maritime transport services and ensuring open markets. In this situation, private economic actors are confronted with substantial legal uncertainty. This book provides a detailed analysis of the history of maritime transport services in the Uruguay and post-Uruguay Round negotiations and the role of the sector in the ongoing Doha Round talks, where Member States have the opportunity to work towards a global regime ensuring the progressive liberalization of the sector. The reader will be confronted with an extensive overview of the role of maritime transport services in the WTO/GATS framework, a topic basically uncovered in the literature so far.

Managerial Economics in a Global, 5e uses the theory of the firm as the unifying theme to examine the managerial decision process. Reflecting the internationalization of tastes, production, and distribution in today's globalizing world, the book integrates a fully global view into managerial economics. It introduces many exciting new topics and managerial tools into the study of managerial economics — topics not fully addressed in other texts — such as firm architecture, strategic behavior, business ethics, electronic commerce, risk management, international economies of scale, the virtual corporation, re-engineering, benchmarking, the learning organization, and the digital factory. In addition, the book illustrates how managerial decisions are actually made, with more relevant and interesting real-world case applications and integrative case studies than any other text on the market.

This text covers the basic techniques and applications of engineering economy for all disciplines in the engineering profession. The writing style emphasizes brief, crisp coverage of the principle or technique discussed in order to reduce the time taken to present and grasp the essentials. The objective of the text is to explain and demonstrate the principles and techniques of engineering economic analysis as applied in different fields of engineering. This brief text includes coverage of multiple attribute evaluation for instructors who want to include non-economic dimensions in alternative evaluation and the discussion of risk considerations in the appendix, compared to Blank's comprehensive text, where these topics are discussed in two unique chapters.
