Derived from the renowned multi-volume International Encyclopaedia of Laws, this book provides ready access to legislation and practice concerning the environment in Canada. A general introduction covers geographic considerations, political, social and cultural aspects of environmental study, the sources and principles of environmental law, environmental legislation, and the role of public authorities. The main body of the book deals first with laws aimed directly at protecting the environment from pollution in specific areas such as air, water, waste, soil, noise, and radiation. Then, a section on nature and conservation management covers protection of natural and cultural resources such as monuments, landscapes, parks and reserves, wildlife, agriculture, forests, fish, subsoil, and minerals. Further treatment includes the application of zoning and land-use planning, rules on liability, and administrative and judicial remedies to environmental issues. There is also an analysis of the impact of international and regional legislation and treaties on environmental regulation. Its succinct yet scholarly nature, as well as the practical quality of the information it provides, make this book a valuable resource for environmental lawyers handling cases affecting Canada. Academics and researchers, as well as business investors and the various international organizations in the field, will welcome this very useful guide, and will appreciate its value in the study of comparative environmental law and policy.

Praise for the second edition: " This book is the best available for teaching the role of law in society and making sense of how it operates within the (inter)connections of race, class and gender dynamics often perpetuating oppression. ... Locating Law is essential for undergraduate students in justice, sociology and criminology. " – Margot Hurlbert, University of Regina " Students regularly tell me that Locating Law is their favourite book out of the selections for the Law and Society course. The case studies are sufficiently different from one another that the students deepen their general knowledge, and they appreciate the fact that the chapters are written in a style they can understand. " – Jennifer Jarman, Lakehead University A primary concern within the study of law has been to understand the " law-society " relation. Underlying this concern is the belief that law has a distinctly social basis; it both shapes – and is shaped by – the society in which it operates. This book explores the law-society relation by locating law within the nexus of race/class/gender/sexuality relations in society. In addition to updating the material in the theoretical and substantive chapters, this third edition of Locating Law includes three new contributions: sentencing law and Aboriginal peoples; corporations and the law; and obscenity and indecency legislation. The analyses offered in the book are sure to generate discussion and debate and, in the process, enhance our understanding of law 's location.

This book presents a comprehensive analysis of the legal and policy frameworks for marine fisheries management and examines the efficiency of the institutions responsible for the formulation, implementation and enforcement of marine fisheries laws and policies in Bangladesh. Sustainable management of marine fisheries is a complex, multi-dimensional and multi-stakeholder process that entails sustainable use of marine living resources and conservation of marine biodiversity. Offering a critical analysis to these frameworks that play a crucial role in the conservation and management of fish stocks in areas within and beyond national jurisdiction, this book examines inadequacies and implementation gaps in the legislative, policy and institutional frameworks that contribute to the unsustainable exploitation of marine fish stocks in Bangladesh. It recommends law and policy reform for conservation and sustainable management of marine fisheries in Bangladesh and the Bay of Bengal.

Three quarters of Canada's forests are under provincial control, so provincial forest policies are crucial to long-term sustainability. By offering an up-to-date comparative scrutiny of forest policies, this book provides forest managers, policy-makers, scholars, and students with the information and concepts to critically examine Canada's complex forest tenure systems. Looking at tenure, stumpage fees, and other forest practices, the authors assess how well different provincial schemes achieve the goals of sustainable forest management. They identify essential policy attributes that could be used to guide tenure reform, consider barriers that could prevent meaningful change, and offer much-needed practical guidance on overcoming these obstacles.
