*Microbiology and Infection Control / FDA*

The microbiology laboratory plays an important role in the surveillance, treatment, control and prevention of nosocomial infections. The microbiologist is a permanent and active member of the infection control committee (ICC) and the antimicrobial stewardship group (ASG). Since most of the infection control and antimicrobial stewardship programs rely on microbiological results, quality assurance is an important issue.

Infection is the presence of microorganisms causing damage to body tissues, usually in the presence of acute inflammation (pain, swelling, redness, heat and loss of function). For example *Staphylococcus aureus* on intact skin does not cause a problem; it is the normal flora for skin. However if you cut your skin, *Staphylococcus aureus* can cause infection in the cut with associated inflammation ...
