Simply put, a PowerShell provider provides a way for PowerShell to access a data store. To get a visual of a provider, think of the file system. The file system is a data store that contains information about files and folders and their properties. We can access the file system via the Command Prompt, PowerShell console, or Windows Explorer.

~~PowerShell providers PowerShell for SQL Server Essentials~~

SQL Server PowerShell Components. The SqlServer module comes with: PowerShell Providers, which enables a simple navigation mechanism similar to file system paths. You can build paths similar to file system paths, where the drive is associated with a SQL Server management object model, and the nodes are based on the object model classes.
