In The New Rules of Retail, industry gurus Robin Lewis and Michael Dart explained how unprecedented consumer power, enabled by technology and globalization, is revolutionizing retail. They warned that survival in these dynamic times called for a business model based on three distinct competencies: preemptive, perpetual distribution; a neurological customer connection; and total control of the value chain. In the years since

that book published, many of their predictions have come true. Now, they revisit timeless case studies like Ralph Lauren and Sears, as well as new additions like Trader Joe's, Lululemon, and Warby Parker, to assess how retailers must continue to evolve in the era of e-commerce, data mining, and tiered distribution. They also identify the five current trends that are currently driving consumer demand, including technology integration and channel consolidation, as exemplified by Jeff Bezos at Amazon. This is a fully revised and updated guide from two proven retail prognosticators.

He's charming and ambitious and has friends in high places; the kind of man who seems to be a sure bet. But in the fickle circles of power, fortunes rise and fall on the turn of a dime, and it may turn out that Stone holds the key not just to one man's fate, but to the fate of the nation.

This new Washington Manual is an ideal quick reference for house officers and practitioners involved in ambulatory care of adult patients.

Prepared by house officers, it has the same front-lines practicality as the world-famous Washington Manual of Medical Therapeutics. Chapters cover outpatient topics that receive little coverage in the original Washington Manual—lipid disorders; complaint-specific therapeutics (e.g. cough); office management of cancer patients (including screening, hospice, and supportive care); musculoskeletal pain; women's and men's health; dermatologic problems; anxiety and mood disorders; and dementia.

Emphasis is on what the clinician needs to know at key decision points in a case. The Washington Manual of Ambulatory Therapeutics is also

available electronically for use in a PDA. The Washington Manual is a registered mark belonging to Washington University in St. Louis to which international legal protection applies. The mark is used in this publication by LWW under license from Washington University.

This textbook on Instructional Design for Learning is a must for all education and teaching students and specialists. It provides a comprehensive overview about the theoretical foundations of the various models of Instructional Design and Technology from its very beginning to the most recent approaches. It elaborates Instructional Design (ID) as a science of educational planning. The book expands on this general understanding of ID and presents an up-to-date

perspective on the theories and models for the creation of detailed and precise blueprints for effective instruction. It integrates different theoretical aspects and practical approaches, such as conceptual ID models, technology-based ID, and research-based ID. In doing so, this book takes a multi-perspective view on the questions that are central for professional ID: How to analyze the relevant characteristics of the learner and the environment? How to create precise goals and adequate instruments of assessment? How to design classroom and technology-supported learning environments? How to ensure effective teaching and learning by employing formative and summative evaluation? Furthermore, this book presents empirical findings on the processes that enable effective

instructional designing. Finally, this book demonstrates two different fields of application by addressing ID for teaching and learning at secondary schools and colleges, as well as for higher education.
