The material included in this book provides selected presentations given at the international symposium MEIS2014. The book aims to provide a unique venue where various issues in computer graphics (CG) application fields are discussed by mathematicians as well as CG researchers and practitioners. The target audience is not limited to researchers in academia but also those in industries with a

strong interest in digital media creation, scientific visualization, and visual engineering. .

The goals of this text are to develop the skills and an appreciation for the richness and versatility of modern time series analysis as a tool for analyzing dependent data. A useful feature of the presentation is the inclusion of nontrivial data sets illustrating the richness of potential applications to problems in the biological, physical, and social sciences as well as medicine. The text presents a balanced and comprehensive treatment of both time and frequency domain methods with an emphasis on data analysis. Numerous examples using data illustrate solutions to problems such as discovering natural and anthropogenic climate change, evaluating pain perception experiments using functional magnetic resonance imaging, and the analysis of economic and financial problems. The text can be used for a one semester/quarter introductory time series course where the prerequisites are an understanding of linear regression, basic calculus-based probability skills, and math skills at the high school level. All of the numerical examples use the R statistical package without assuming that the reader has previously used the software. Robert H. Shumway is Professor Emeritus of Statistics, University of California, Davis. He is a Fellow of the American Statistical Association and has won the American Statistical Association Award for Outstanding Statistical Application. He is the author of numerous texts and served on editorial boards such as the Journal of Forecasting and the Journal of the American Statistical Association. David S. Stoffer is Professor of Statistics, University of Pittsburgh. He is a Fellow of the American Statistical Association and has won the American Statistical Association Award for Outstanding Statistical Application. He is currently on the editorial boards of the

Journal of Forecasting, the Annals of Statistical Mathematics, and the Journal of Time Series Analysis. He served as a Program Director in the Division of Mathematical Sciences at the National Science Foundation and as an Associate Editor for the Journal of the American Statistical Association and the Journal of Business & Economic Statistics.

An applications-oriented introduction to process fluid mechanics. Provides an orderly treatment of the essentials of both the macro and micro problems of fluid mechanics.

This sixth edition reflects almost 40 years of scholarship as well as professional and personal practice in recreation, parks, and tourism. The text has become one of the most widely adopted titles in university courses worldwide. In this new edition of the book, the phenomenon of leisure is presented through new research findings and contemporary societal dilemmas to suggest that leisure is one of the most interesting, relevant, and exciting subjects of study today. The book reflects a wide range of material from the disciplines of leisure studies, sociology, psychology, economics, political science, anthropology, geography, the humanities, and media and cultural studies. Indeed, more than a textbook, this is very much a point of view. Leisure is presented as a human phenomenon that is individual and collective, vital and frivolous, historical and contemporary, factual and subjective, and good and bad. As a learning tool, this sixth edition teaches more. It contains updated and new illustrations of concepts through field-based cases, biographical features, exploratory activities, and research studies. In the first part, leisure is defined as a condition of humanity. Its meanings are traced through the humanities and history, as well as in today's connotations. The benefits of leisure are presented, ranging from freedom to pleasure to risk to spirituality, and

leisures benefit to healthful well-being is demonstrated. As well, part one of the text presents theories for explaining leisure behavior. Part Two discusses leisure as a cultural mirror -- its societal context. Chapters include leisure and anthropology, geography, technology, popular culture, and taboo recreation. Finally, in Part Three, the functional side of leisure is explored in terms of its instrumental relationship to work, money, time, and equity. Leisure systems of public, private, and commercial sponsorship are described to confirm leisure's utility. Instructor resources and a website for student resources are available.

This book offers an introduction to post-quantum cryptography for students, engineers and researchers in the field of information security. Above all, it describes the mathematical concepts underlying the security of post-quantum cryptographic schemes. The first part of the book provides essential background information by briefly introducing the core elements of quantum computation and presenting Shor's algorithm, which solves the factoring problem and the discrete logarithm problem in polynomial time. In turn, the second part presents a number of candidates for post-quantum public-key encryption and digital signature schemes. The security of these schemes is based on mathematical problems in coding theory, multivariate quadratic equations, and lattices, respectively. The book provides an essential guide for students, researchers and engineers, helping them to quickly grasp this highly promising area of cryptography.

We've been talking about changing corporate America for decades. Decades. And yet no real change has occurred. At least not when it comes to equality for all. Honestly, the talk is lip service for most. Why? Because the dominant group will

not give up power willingly. So what will it take to originate authentic change for corporate America in today's climate? To achieve equality for all? Our country is running at a fever pitch. And so is our business world. And it seems there's no solution. Until you talk to Trudy Bourgeois. She knows the solution. She lives the solution. And she teaches the solution. The solution for our world today is this: courageous conversations. Courageous conversations about the difficult topics that get to the emotional level to create buy-in. At ALL levels of corporate America, top-to-bottom and bottom-to-top. Nothing happens until we talk about the truth and get to the core of the situation. Trudy takes the lead in those conversations right here and now. Throughout this groundbreaking book, she lights our path through the hard topics, through the tough and uncomfortable conversations, in such a way as to speak the truth in love - something she does well. If you are a leader of people (which is all of us), then settle in and get ready to learn and grow. Trudy Bourgeois takes her own personal and professional life experiences and the experiences of hundreds of leaders who were interviewed across generations and genders for this book provides. She provides a roadmap to a place called "deep democracy." It is in this place where cultures are bred that level the playing field, unleash potential, and afford everyone an equal opportunity to authentically contribute at their highest level. Trudy isn't afraid to have the courageous conversations necessary for true change and equality to finally take place in corporate America. If you want to experience success as a leader in today's world, you will want to not only read this book but also think long and hard about your habits, behaviors and patterns that shape how you engage across differences. Your success depends upon it.

Using humor as the common denominator, a multicultural

cast of YA authors steps up to the mic to share stories touching on race. Listen in as ten YA authors — some familiar, some new — use their own brand of humor to share their stories about growing up between cultures. Henry Choi Lee discovers that pretending to be a tai chi master or a sought-after wiz at math wins him friends for a while — until it comically backfires. A biracial girl is amused when her dad clears seats for his family on a crowded subway in under a minute flat, simply by sitting quietly in between two uptight white women. Edited by acclaimed author and speaker Mitali Perkins, this collection of fiction and nonfiction uses a mix of styles as diverse as their authors, from laugh-out-loud funny to wry, ironic, or poignant, in prose, poetry, and comic form.

A complete—and completely enjoyable—new illustrated guide to calculus Master cartoonist Larry Gonick has already given readers the history of the world in cartoon form. Now, Gonick, a Harvard-trained mathematician, offers a comprehensive and up-to-date illustrated course in first-year calculus that demystifies the world of functions, limits, derivatives, and integrals. Using clear and helpful graphics—and delightful humor to lighten what is frequently a tough subject—he teaches all of the essentials, with numerous examples and problem sets. For the curious and confused alike, *The Cartoon Guide to Calculus* is the perfect combination of entertainment and education—a valuable supplement for any student, teacher, parent, or professional.
