Where To Download

A serverless architecture is a way to build and run applications and services without having to

manage infrastructure.

Your application still runs on servers, but all the server management is done by AWS. You no longer have to provision, scale, and maintain servers to run your applications, databases, and storage systems.

AWS HTTP APIs, like API Gateway itself, tie together discrete Lambda Functions and your application's API routes.

This allows you to trigger a serverless function response directly to an HTTP request and is a critical component of using serverless APIs within web applications.
