Spectroscopy Lab Answers - e-actredbridgefreeschool.org

In this virtual lab you will:

1. Observe the bright line spectra (emission spectra) for various elements.
2. Use a flame test to observe the color produced when metal ions are heated.
3. Identify

Emission Spectroscopy Lab Report Answers

In-Lab Questions The laboratory work involves identification of an unknown by recording its infrared spectrum, investigating the major absorption bands, and comparing the spectrum with spectra of a group of known compounds. Please print the worksheet for this lab. You will need this sheet to record your data.

Introduction to spectroscopy
The word spectroscopy is used to refer to the broad area of science dealing with the absorption, emission, or scattering of electromagnetic radiation by molecules, ions, atoms, or nuclei. Spectroscopic techniques are some of the most widely used analytical methods in the world today.

Spectroscopy: A Virtual Lab
Element Identification and Emission Spectra. What you need to know: The energy levels in atoms and ions are the key to the production and detection of light. Energy levels or "shells" exist for electrons in atoms and molecules. The colors of dyes and other compounds results from electron jumps between these shells or levels, just like the colors of fireworks result from jumps of electrons from one shell to
