Coffeemakers or coffee machines are cooking appliances used to brew coffee. While there are many different types of coffeemakers using several different brewing principles, in the most common devices, coffee grounds are placed into a paper or metal filter inside a funnel, which is set over a glass or ceramic coffee pot, a cooking pot in the kettle family. Cold water is poured into a separate chamber, which is then boiled and directed into the funnel. This is also called automatic drip-brew.

The Design of Coffee provides a non-mathematical introduction to chemical engineering, as illustrated by the roasting and brewing of coffee. Hands-on coffee experiments demonstrate key engineering principles, including material balances, chemical kinetics, mass transfer, fluid mechanics, conservation of energy, and colloidal phenomena. The experiments lead to an engineering design competition where contestants strive to make the best tasting coffee using the least amount of energy - a classic engineering optimization problem, but one that is both fun and tasty! Anybody with access to a sink, electricity, and inexpensive coffee roasting and brewing equipment can do these experiments, either as part of a class or with your friends at home. The Design of Coffee will help you understand how to think like an engineer - and how to make excellent coffee! FEATURES: * Covers all aspects of making coffee, from green beans to the final brew * Does not require calculus or college-level chemistry * Emphasizes the scientific method and introductory data analysis with guided data sheets and lab report questions * Includes 9 full experiments, each with background on key concepts, overview of necessary equipment, and detailed instructions: Lab 1 - Reverse Engineering a Drip Coffee Brewer Lab 2 - Process Flow Diagram and Mass Balances for Coffee Lab 3 - The pH of Coffee and Chemical Reactions Lab 4 - Measuring the Energy Used to Make Coffee Lab 5 - Mass Transfer and Flux during Brewing Lab 6 - Coffee as a Colloidal Fluid and the Effect of Filtration Lab 7 - First Design Trials: Optimizing Strength & Extraction Lab 8 - Second Design Trials: Scaling Up to 1 Liter of Coffee Lab 9 - Design Competition and Blind Taste Panel

From Design Thinking to Design Doing Innovators today are told to run loose and think lean in order to fail fast and succeed sooner. But in a world obsessed with the new, where cool added features often trump actual customer needs, it's the consumer who suffers. In our quest to be more agile, we end up creating products that underwhelm. So how does a company like Nest, creator of the mundane thermostat, earn accolades like "beautiful" and "revolutionary" and a \$3.2 billion Google buyout? What did Nest do differently to create a household product that people speak of with love? Nest, and companies like it, understand that emotional connection is critical to product development. And they use a clear, repeatable design process that focuses squarely on consumer engagement rather than piling on features for features' sake. In this refreshingly jargon-free and practical book, product design expert Jon Kolko maps out this process, demonstrating how it will help you and your team conceive and build successful, emotionally resonant products again and again. The key, says Kolko, is empathy. You need to deeply understand customer needs and feelings, and this understanding must be reflected in the product. In successive chapters of the book, we see how leading companies use a design process of storytelling and iteration that evokes positive emotions, changes behavior, and creates deep engagement. Here are the four key steps: 1. Determine a product-market fit by seeking signals from communities of users. 2. Identify behavioral insights by conducting ethnographic research. 3. Sketch a product strategy by synthesizing complex research data into simple insights. 4. Polish the product details using visual representations to simplify complex ideas. Kolko walks the reader through each step, sharing eye-opening insights from his fifteen-year career in product design along the way. Whether you're a designer, a product developer, or a marketer thinking about your company's next offering, this book will forever change the way you think about—and create—successful products.

-Successfully interweaves coffee, art, architecture, and design by providing the full range of retail spaces, including coffee shops located in historic buildings, modern architecture, ex-industrial warehouses, offices, and more -Features an expertly curated list of architectural interior spaces from around the globe, including from Australia, Britain, Canada, China, Czech Republic, Denmark, France, Germany, Italy, Japan, Mexico, the Netherlands, New Zealand, South Korea, Spain, Sweden, and the United States -Full color photography by professional architectural photographers -Book lends itself to significant interest and discussion as coffee is such a large part of daily culture There's something very special about being able to relish a quality espresso or expertly brewed filter coffee in beautifully designed surroundings. What is the magic formula that makes a café space so inviting, so successful, with a buzz in the atmosphere that's so enjoyable? Café Culture: For Lovers of Coffee and Good Design brings together a selection of well-crafted interior spaces by those with both a strong sense of good design aesthetics and a refined appreciation of the art of a good coffee experience. As the much-anticipated follow-up to Robert Schneider's very successful first book, Coffee Culture: hot coffee + cool spaces - design inspiration that presents coffee shop designs from across the United States, in his new book Schneider expands on the theme by showcasing a wonderful new collection of designs, this time from around the globe, including from Australia and New Zealand, Europe, China, South Korea and Japan, Britain, and North America. Richly illustrated throughout with full-color photos that capture the feel and personality of each coffee shop, and with detailed analysis of each design and its features, along with an insightful overview of the industry trends in design across the globe, this book successfully connects an appreciation for great coffee with spaces that invite human interaction and create memories through good design.

If you're one of the 200 million Americans who drink coffee every day, you may have marveled at the ubiquitous plastic coffee cup lid, with its clever combination of indentations, protrusions, tabs, and score lines that can be pinched, pulled, pushed, punctured, and tucked to create an opening to sip from while also keeping a piping-hot liquid in its place. Louise Harpman and Scott Specht have collected these familiar triumphs of industrial design, in their

many variations, for decades, creating what Smithsonian magazine calls the world's largest collection of coffee cup lids. In addition to oddly compelling close-up photographs, Harpman and Specht include lively field-guides to their classification system and patent drawings for many of the most unique designs. This beautifully designed book will appeal to designers, coffee drinkers, and anyone who delights in the small bits of humble genius that surround us every day. You'll never look at your to-go coffee cup the same way again.
