The Great Divergence brings new insight to one of the classic questions of history: Why did sustained industrial growth begin in Northwest Europe, despite surprising similarities between advanced areas of Europe and East Asia? As Ken Pomeranz shows, as recently as 1750, parallels between these two parts of the world were very high in life expectancy, consumption, product and factor markets, and the strategies of households.

The Great Divergence: China, Europe, and the Making of the ...

A landmark comparative history of Europe and China that examines why the Industrial Revolution emerged in the West The Great Divergence sheds light on one of the great questions of history: Why did sustained industrial growth begin in Northwest Europe? Historian Kenneth Pomeranz shows that as recently as 1750, life expectancy, consumption, and product and factor markets were comparable in Europe and East Asia.

Amazon.com: The Great Divergence: China, Europe, and the ...

The Great Divergence or European miracle is the socioeconomic shift in which the Western world (i.e. Western Europe and the parts of the New World where its people became the dominant populations) overcame pre-modern growth constraints and emerged during the 19th century as the most powerful and wealthy world civilization, eclipsing Mughal India, Qing China, the Islamic world, the kingdoms and ...

Pomeranz argues that Europe's nineteenth-century divergence from the Old World owes much to the fortunate location of coal, which substituted for timber. This made Europe's failure to use its land intensively much less of a problem, while allowing growth in energy-intensive industries. Another crucial difference that he notes has to do with trade.

The Great Divergence: China, Europe, and the Making of the ...

The Great Divergence is a synthesis created from a rich array of secondary sources. In style and scholarship, it is reminiscent of E. L. Jones' s European Miracle: Environments, Economies, and Geopolitics in the History of Europe and Asia (Cambridge: Cambridge University Press, [1971] 2003), which is ironic given that the thrust of Pomeranz' s argument is exactly the opposite of Jones' s.

THE GREAT DIVERGENCE

The Great Divergence brings new insight to one of the classic questions of history: Why did sustained industrial growth begin in Northwest Europe, despite surprising similarities between advanced areas of Europe and East Asia? As Ken Pomeranz shows, as recently as 1750, parallels between these two parts of the world were very high in life expectancy, consumption, product and factor markets, and the strategies of households.

The Great Divergence | Princeton University Press

The circumstances surrounding the Great Divergence, as it is known, when Europe pulled ahead of China and the rest of the world, remain a source of lively academic debate (see Vries 2015 for a recent survey). The issue is notably controversial from a Chinese perspective.

Why China was on the wrong side of the Great Divergence ...

The great divergence summed up would be as follows; there is this theory on why China was different from Europe and that is why Europe become the economic powerhouse and not china, then Kenneth Pomeranz steps in and in a dozen or so pages filled with tons of data and comparative analysis or case studies points out how much assumption and how little fact based research is in this specific theory and up we go to the next theory.

The Great Divergence: China, Europe, and the Making of the ...

Scholars have searched for the exceptional homegrown ingredients that stimulated the European economic take off and resulted in the great divergence from the historically advanced societies of Asia. Some have emphasised the unique advantageous material and ecological circumstances, others have focused on the institutional or scientific structures and others still on the specific favourable economical factors in particular the capital accumulation , either internally generated or externally ...

The Great Divergence: China, Europe, and the Making of the ...

Kenneth Pomeranz, the author of *The Great Divergence: China, Europe and the Making of the Modern World Economy*, belongs to the California School. He thinks that the reason for the appearance of the Industrial Revolution should be attributed to Britain ' s luck in geography, especially the coals and colonies.

China, Europe, and the Great Divergence: A Study in ...

The great economic divergence between China and Europe has generated countless debates, and as various scholars unite to provide reasons for this phenomenon, numerous interesting theories are born. Among these views is the monumental theory of history researcher and professor Kenneth Pomeranz.

This made Europe's failure to use its land intensively much less of a problem, while allowing growth in energy-intensive industries. Another crucial difference that he notes has to do with trade. Fortuitous global conjunctures made the Americas a greater source of needed primary products for Europe than any Asian periphery. This allowed Northwest Europe to grow dramatically in population, specialize further in manufactures, and remove labor from the land, using increased imports rather than maximizing yields. Together, coal and the New World allowed Europe to grow along resource-intensive, labor-saving paths. Meanwhile, Asia hit a cul-de-sac. Although the East Asian hinterlands boomed after 1750, both in population and in manufacturing, this growth prevented these peripheral regions from exporting vital resources to the cloth-producing Yangzi Delta.

A landmark comparative history of Europe and China that examines why the Industrial Revolution emerged in the West *The Great Divergence* sheds light on one of the great questions of history: Why did sustained industrial growth begin in Northwest Europe? Historian Kenneth Pomeranz shows that as recently as 1750, life expectancy, consumption, and product and factor markets were comparable in Europe and East Asia. Moreover, key regions in China and Japan were no worse off ecologically than those in Western Europe, with each region facing corresponding shortages of land-intensive products. Pomeranz ' s comparative lens reveals the two critical factors resulting in Europe's nineteenth-century divergence—the fortunate location of coal and access to trade with the New World. As East Asia ' s economy stagnated, Europe narrowly escaped the same fate largely due to favorable resource stocks from underground and overseas. This Princeton Classics edition includes a preface from the author and makes a powerful historical work available to new readers.

Studer shows that institutional, geographical, political, and technological factors account for Europe's rise to undisputed world economic leader.

China has reemerged as a powerhouse in the global economy, reviving a classic question in economic history: why did sustained economic growth arise in Europe rather than in China? Many favor cultural and environmental explanations of the nineteenth-century economic divergence between Europe and the rest of the world. This book, the product of over twenty years of research, takes a sharply different tack. It argues that political differences which crystallized well before 1800 were responsible both for China ' s early and more recent prosperity and for Europe ' s difficulties after the fall of the Roman Empire and during early industrialization. Rosenthal and Wong show that relative prices matter to how economies evolve; institutions can have a large effect on relative prices; and the spatial scale of polities can affect the choices of institutions in the long run. Their historical perspective on institutional change has surprising implications for understanding modern transformations in China and Europe and for future expectations. It also yields insights in comparative economic history, essential to any larger social science account of modern world history.

Why Europe Grew Rich and Asia Did Not provides a striking new answer to the classic question of why Europe industrialised from the late eighteenth century and Asia did not. Drawing significantly from the case of India, Prasannan Parthasarathi shows that in the seventeenth and eighteenth centuries the advanced regions of Europe and Asia were more alike than different, both characterized by sophisticated and growing economies. Their subsequent divergence can be attributed to different competitive and ecological pressures that in turn produced varied state policies and economic outcomes. This account breaks with conventional views, which hold that divergence occurred because Europe possessed superior markets, rationality, science or institutions. It offers instead a groundbreaking rereading of global economic development that ranges from India, Japan and China to Britain, France and the Ottoman Empire and from the textile and coal industries to the roles of science, technology and the state.

In a series of brief vignettes the authors bring to life international trade and its actors, and also demonstrate that economic activity cannot be divorced from social and cultural contexts. In the process they make clear that the seemingly modern concept of economic globalisation has deep historical roots.

An exploration of the debates surrounding the comparative economic development of Europe and Asia.

This wholly original reassessment of critical issues in modern Chinese history traces social, economic, and ecological change in inland North China during the late Qing dynasty and the Republic. Using many new sources, Kenneth Pomeranz argues that the development of certain regions entailed the systematic underdevelopment of other regions. He maps changes in local finance, farming, transportation, taxation, and popular protest, and analyzes the consequences for different classes, sub-regions, and genders. Pomeranz attributes these diverse developments to several causes: the growing but incomplete integration of North China into the world economy, the state's abandonment of many hinterland areas and traditional functions, and the effect of local social structures on these processes. He shows that hinterlands were made, not merely found, and were powerfully shaped by the strategies of local groups as well as outside forces.

"The great virtue of this stimulating book is its relentless push to redefine our framework for thinking about the early modern economy. . . . A benchmark study."--R. Bin Wong, University of California, Irvine "Frank shows how Marx and Weber got it all wrong. A fundamental rethinking of the rise of the West and the origin of the world-system. Absolutely essential to understanding world history."--Albert Bergesen, University of Arizona "The great virtue of this stimulating book is its relentless push to redefine our framework for thinking about the early modern economy. . . . A benchmark study."--R. Bin Wong, University of California, Irvine
