Hummingbirds have a short life span with many not surviving their first year and most dying within three to four years of their birth. They are found in habitats that range from deserts and plains to mountains and rain forests.

Life Cycle of the Hummingbird | Sciencing

A. Most hummingbirds die their first year, but when they've survived a full annual cycle, their life expectancy goes up dramatically. The record age of a banded ruby-throated hummingbird is 6 years, 11 months. The record age of a banded rufous hummingbird is 8 years 1 month.

The Life of the Hummingbird by A F Skutch - AbeBooks

What is the life expectancy of a hummingbird? The truth is that the life expectancy of a hummingbird is quite varied. The average is found in the 5 years of life, but in some cases, specimens have been detected that have reached 10 years of life. Those living in urbanized areas are at higher risk of dying young. Mainly because they are one of the most common prey of stray or domestic cats that hunt them in parks and gardens.
