...

Parallel Computing is a

compelling vision of how computation can seamlessly scale from a single processor to virtually limitless computing power. Unfortunately, the scaling of application performance has not matched peak speed,

and the programming burden for these machines remains heavy. The applications must be programmed to exploit parallelism in the most efficient way possible. Today, the ...

The Sourcebook of Parallel Computing - Jack Dongarra - Bok ...

The main difference between parallel and distributed computing is that parallel computing allows multiple processors to execute tasks

simultaneously while distributed computing divides a single task between multiple computers to achieve a common goal.. A single processor executing one task after the other is not an efficient method in a

computer. . Parallel computing provides a solution to ...
