Solution : Now we need to find the height of the side AB. Sin θ = Opposite side/Hypotenuse side, sin θ = AB/AC, sin 60° = AB/100, 33/2 = AB/100, (33/2) x 100 = AB, AB = 50 33 m. So, the height of kite from the ground 50 33 m.

What is trigonometry? Trigonometry is a branch of mathematics. The word itself comes from the Greek trig/ῆον (which means "triangle") and metron ("measure"). As the name suggests, trigonometry deals mostly with angles and triangles; in particular, it's defining and using the relationships and ratios between angles and sides in triangles. The primary application is thus solving triangles, specifically right triangles, but also any other type of triangle you like.

Trigonometry Calculator. Simple way to find sin, cos, tan, cot

tan = sin/cos = 1/cot, sin = tan/ sec = 1/cosec if you put it simply it implies that sin equals divided cosec, cosec = 1/sec = cot/cosec. As with any other subject, it's all about practice, so make sure to spend even as little as 30 minutes every day solving trigonometry problems if you want to master this subject.

Trigonometry can find that missing angle and distance. Or maybe we have a distance and angle and need to "plot the dot" along and up: Questions like these are common in engineering, computer animation and more. And trigonometry gives the answers!
