Urban Planning and Public Policy. Harvard Kennedy School (HKS) and the Harvard University Graduate School of Design (GSD) offer a joint degree program in public policy and urban planning. The joint degree program permits students to pursue a Master in Public Policy (MPP) degree at HKS and a Master in Urban Planning (MUP) degree at the GSD and to complete both degrees in three years, rather than the four years that would be required if the two degrees were pursued independently.

The Policy seeks to introduce urban design thinking into the planning and preparation of development proposals. It promotes an evidence based mode of practice through which development proposals are unpacked as a logical series of design decisions during which the requirements of the applicant are fulfilled and the public environment is improved.

URBAN DESIGN POLICY (POLICY NUMBER 12986)

Another early explanation identified urban policy as an expression of the rise of a new political class: new professionals in government and academia seeking to stake their own position as an alternative policy elite, based around the rise of the social sciences and what has come to be called evidence based policymaking, rather than the traditional culture of the civil service or public bureaucracy (Marris & Rein 1972). This interpretation, too, has its attractions, since it fits well with ...

Evidence for urban design and public health policy and ...

Urban planning is a technical and political process concerned with the development and design of land use and the built environment, including air, water, and the infrastructure passing into and out of urban areas, such as transportation, communications, and distribution networks. Urban planning deals with physical layout of human settlements. The primary concern is the public welfare, which includes considerations of efficiency, sanitation, protection and use of the environment, as well as effe

Policy in Urban Planning: Structure Plans, Programmes and Local Plans provides an overview of the policy in urban planning. The title details the different policy statements available in expressing urban planning policy. The first part of the text talks about the need for policy; this part tackles activities, resources, and change, along with the forces of environmental change and ways to control environmental change. The second part of the selection covers concerns in the expression of policy, and discusses topics such as the nature of policy; some dimension of policy planning; and policy statement. The last part of the text details the making of policy. The book will be of great interest to political scientists, sociologists, local government officials, and urban planners.

The 1992 Los Angeles riots catapulted the problems of the city back onto the policy agenda. The cauldron of social problems of the city, as the riots showed, offers no simple solutions. Indeed, urban policy includes a range of policy issues involving welfare, housing, job training, education, drug control, and the environment. The myriad of local, state, and federal agencies only further complicates formulating and implementing coherent policies for the city. This volume, while not offering specific proposals to remedy the problems of the city, provides a broad historical context for discussing contemporary urban policy and for arriving at new prescriptions for relieving the ills of the American city. The essays address issues related to public housing, poverty, transportation, and the environment. In doing so, the authors discuss larger themes in urban policy as well as provide case studies of how policies have been implemented over time in specific cities. Of particular interest are two essays that discuss the role of the historian in shaping urban policy and the importance of historical preservation in urban planning.

Today the practice of urban design has forged a distinctive identity with applications at many different scales – ranging from the block or street scale to the scale of metropolitan and regional landscapes. Urban design interfaces many aspects of contemporary public policy – multiculturalism, healthy cities, environmental justice, economic development, climate change, energy conservations, protection of natural environments, sustainable development, community liveability, and the like. The field now comprises a core body of knowledge that enfolds a rich history of ideas, paradigms, principles, tools, research and applications, enriched by electric influences from the humanities, and social and natural sciences. Companion to Urban Design includes more than fifty original contributions from internationally recognized authorities in the field. These contributions address the following questions: What are the important ideas that have shaped the field and the current practice of urban design? What are the major methods and processes that have influenced the practice of urban design at various scales? What are the current innovations relevant to the pedagogy of urban design? What are the lingering debates, conflicts and contradictions in the theory and practice of urban design? How could urban design respond to the contemporary challenges of climate change, sustainability, active living initiatives, globalization, and the like? What are the significant disciplinary influences on the theory, research and practice of urban design in recent times? There has never before been a more authoritative and comprehensive companion that includes core, foundational and pioneering ideas and concepts of urban design. This book serves as an invaluable guide for undergraduate and postgraduate students, future professionals, and practitioners interested in architecture, landscape architecture, and urban planning, but also in urban studies, urban affairs, geography, and related fields.

Time has become an increasingly important topic in urban studies and urban planning. The spatial-temporal interplay is not only of relevance for the theory of urban development and urban politics, but also for urban planning and governance. The space-time approach focuses on the human being with its various habits and routines in the city. Understanding and taking those habits into account in urban planning and public policies offers a new way to improve the quality of life in our cities. Adapting the supply and accessibility of public spaces and services to the inhabitants' space-time needs calls for an integrated approach to the physical design of urban space and to the organization of cities. In the last two decades the body of practical and theoretical work on urban space-time topics has grown substantially. The book offers a state of the art overview of the theoretical reasoning, the development of new analytical tools, and practical experience of the space-time design of public cities in major European countries. The contributions were written by academics and practitioners from various fields exploring space-time research and planning.

The contributors of Policy, Planning, and People argue for the promotion of social equity and quality of life by designing and evaluating urban policies and plans. Edited by Naomi Carmon and Susan S. Fainstein, the volume features original essays by leading authorities in the field of urban planning and policy, mainly from the United States, but also from Canada, Hungary, Italy, and Israel. The contributors discuss goal setting and ethics in planning, illuminate paradigm shifts, make policy recommendations, and arrive at best practices for future planning. Policy, Planning, and People includes theoretical as well as practice-based essays on a wide range of planning issues: housing and neighborhood, transportation, surveillance and safety, the network society, regional development and community development. Several essays are devoted to disadvantaged and excluded groups such as senior citizens, the poor, and migrant workers. The unifying themes of this volume are the values of equity, diversity, and democratic participation. The contributors discuss and draw conclusions related to the planning process and its outcomes. They demonstrate the need to look beyond efficiency to determine who benefits from urban policies and plans. Contributors: Alberta Andreotti, Tridib Banerjee, Rachel G. Bratt, Naomi Carmon, Karen Chapple, Norman Fainstein, Susan Fainstein, Eran Feitelson, Amnon Frenkel, George Galster, Penny Gurstein, Deborah Howe, Norman Krumholz, Jonathan Levine, Anastasia Loukaitou-Sideris, Enzo Mingione, Kenneth Reardon, Izhak Schnell, Daniel Shefer, Michael Teitz, Iván Tosics, Lawrence Vale, Martin Wachs.

Urban Economy: Real Estate Economics and Public Policy analyses urban economic change and public policy in a more practical way than a typical urban economics book. The book has a distinctive framework that considers the underlying reasons, and the consequences of urban change for real estate investors and policy makers. Part 1 covers the basics of urban economics and real estate markets, including housing and commercial. Part 2 looks at the reformulation of urban systems and the reasons why. It then considers the consequences for real estate markets and investment of decentralisation forces and emerging technology. The issues that arise for urban public policy are then discussed, notably transport policies, public finance and sustainability, before a chapter examining housing neighbourhood and housing market dynamics and a shift from spatial change to regeneration. Part 3 reverses the dominant perspective of Part 2 to assess the effectiveness of how property led policies can positively influence a local economy and urban regeneration. The chapters consider several important policy questions and constraints and draw on a number of case studies that illustrate the benefits and drawbacks. The book includes chapter objectives, self-assessment questions, chapter summaries, learning outcomes, case studies, global data and statistics and is a new textbook for core courses in urban economics and real estate economics on global Real Estate, Planning and related degree courses.
