Proton Therapy For Re

Proton beam therapy is a type of external beam radiotherapy. Proton beam therapy is only suitable for a small number of people. It is used to help reduce the risk of long-term side effects that can sometimes develop after standard radiotherapy. It can also be used to treat cancers that are close to important structures in the body.

Proton beam therapy - Macmillan Cancer Support

Proton therapy, sometimes called proton beam therapy, is a type of radiation used to treat cancer. It uses tiny particles called protons to do the job that X-rays do in traditional radiation...

Proton Therapy: What You Need to Know - WebMD

Proton therapy is a type of radiation therapy — a treatment that uses high-energy beams to treat tumors. Radiation therapy using X-rays has long been used to treat cancers and noncancerous (benign) tumors. Proton therapy is a newer type of radiation therapy that uses energy from positively charged particles called protons.

AIM: The purpose of this study was to clarify the efficacy and toxicities of re-irradiation using proton beam therapy combined with weekly intra-arterial chemotherapy for recurrent oral cancer.

METHODS: Between October 2009 and July 2014, 34 patients who had recurrent oral cancer were treated by proton beam therapy combined with intra-arterial

Proton beam therapy is a type of
radiotherapy treatment. It uses high energy
or low energy proton beams to treat
cancer. It is a treatment for some types of
cancer. Most people don't need to have
proton beam therapy and have external
radiotherapy using high energy x-rays
(photons).

The Rutherford Cancer Centre Network offers proton beam therapy that is delivered using the latest IBA ProteusONE machines. Utilising pencil beam scanning for an advanced level of precision, proton beam therapy uses high-energy proton beams that are directed to the target area with pinpoint accuracy and are delivered in the exact shape of the tumour.

Proton therapy is a type of external beam radiotherapy that uses ionizing radiation. In proton therapy, medical personnel use a particle accelerator to target a tumor with a beam of protons. These charged particles damage the DNA of cells, ultimately killing them by stopping their reproduction and thereby eliminating the tumor.
