What could be more familiar than the Christmas story--and yet what could be more extraordinary? The cast of characters is strange and exotic: shepherds and magicians, an emperor and a despot, angels, and a baby who is Almighty God. The strangeness calls for an explanation, and this book provides it by examining the characters and the story in light of the biblical and historical context. Bestselling author Scott Hahn who has written extensively on Scripture and the early Church, brings evidence to light, dispelling some of the mystery of the story. Yet Christmas is made familiar all over again by showing it to be a family story. Christmas, as it appears in the New Testament, is the story of a father, a mother, and a child--their relationships, their interactions, their principles, their individual lives, and their common life. To see the life of this "earthly trinity" is to gaze into heaven.

Cellular telephones, satellite communications and radar systems are adding to the increasing demand for radio frequency circuit design principles. At the same time, several generations of digitally-oriented graduates are missing the essential RF skills. This book contains a wealth of valuable design information difficult to find elsewhere. It's a complete 'tool kit' for successful RF circuit design. Written by experienced RF design engineers from Motorola's semiconductors product section. Book covers design examples of circuits (e.g. amplifiers; oscillators; switches; pulsed power; modular systems; wiring state-of-the-art devices; design techniques).

This volume addresses the need to revisit the economic theories from the last two decades that have contributed to the development of a concentrated research agenda on nonprofit organizations. Long neglected as a topic of theorizing and empirical investigation by mainstream economics in particular, these initial theories of nonprofit organizations from the late 1970s and early 1980s continue to shape theoretical and conceptual efforts. Importantly, their influence extends beyond economics and informs sociological and politics science approaches to the set of organizations and institutions located between the market firm and the state agency as well. While the theoretical map of nonprofit research has expanded beyond these early attempts and now include several other major theories such as stakeholder approaches, supply-side or entrepreneurial theories, institutional theories and comparative approaches. This work suggests that it is time to take stock and reexamine some of the basics from which these economic theories operate.
