The M.I.T. Introductory Physics Series is the result of a program of careful study, planning, and development that began in 1960.

The main theme of this highly successful book is that the transmission of energy by wave propagation is fundamental to almost every branch of physics. Therefore, besides giving students a thorough grounding in the theory of waves and vibrations, the book also demonstrates the pattern and unity of a large part of physics. This new edition has been thoroughly revised and has been redesigned to meet the best contemporary standards. It includes new material on electron waves in solids using the Kronig-Penney model to show how their allowed energies are limited to Brillouin zones, The role of phonons is also discussed. An Optical Transform is used to demonstrate the modern method of lens testing. In the last two chapters the sections on chaos and solitons have been reduced but their essential contents remain. As with earlier editions, the book has a large number of problems together with hints on how to solve them. The Physics of Vibrations and Waves, 6th Edition will prove invaluable for students taking a first full course in the subject across a variety of disciplines particularly physics, engineering and mathematics.

Eekhoud's legendary account of love between the Count and Guidon... following the latter's dalliance with servant gal Blandine. Tame by 19th century standards, it's still a foundational work of gay literature.

This introductory text emphasises physical principles, rather than the mathematics. Each topic begins with a discussion of the physical characteristics of the motion or system. The mathematics is kept as clear as possible, and includes elegant mathematical descriptions where possible. Designed to provide a logical development of the subject, the book is divided into two sections, vibrations followed by waves. A particular feature is the inclusion of many examples, frequently drawn from everyday life, along with more cutting-edge ones. Each chapter includes problems ranging in difficulty from simple to challenging and includes hints for solving problems. Numerous worked examples included throughout the book.

The book opens with a description of the smooth transition from Newtonian to Einsteinian behaviour from electrons as their energy is progressively increased, and this leads directly to the relativistic expressions for mass, momentum and energy of a particle.

Known as one of the key figures in the 'weird' horror movement that arose in England and the United States in the early twentieth century, Algernon Blackwood was known for inserting surprising, often sophisticated twists into his tales. The Damned tells the story of a haunted house whose supernatural activity stems from an unlikely source.

The bestselling unauthorized guide that will ensure that you get the most out of the Kindle - or give you all the information you need before you decide to buy.

The text material in the present volume is designed to be a more or less self-contained introduction to Newtonian mechanics, such that a student with little or no grounding in the subject can, by beginning at the beginning, be brought gradually to a level of considerable proficiency.

Francophile Karen Eberwein had always dreamed of becoming fluent in French. She realized that the perfect way to learn is total immersion - in a small village in the Dordogne Valley. So she packs a bag, rents a rustic stone cottage, and spends nearly a year in Cenac-et-Saint-Julien, France. Karen refuses to speak English, vows to speak to anyone who is willing to talk to her, religiously carries a French dictionary, and retains a light-hearted, playful approach to learning the language. She has carefully chosen a village not dominated by tourism, arrived in December, and in a surprisingly short amount of time, the local people befriend her. Claire, her fast-talking neighbor, invites her to dinner (when it is customary to know someone for years before welcoming them inside your home) and to the 31st Exposition Nationale d'Aviculture, where Claire is showing her pigeons. The elderly man down the hill, Jean-Paul, asks Karen along on a truffle hunting adventure, a visit to a hidden, ancient walnut mill, and accompanies her to the local Occitan festival, where he shares childhood and wartime memories. The local baker invites Karen to observe a typical day at the bakery, starting at 3:00 am., to see how the breads and croissants are made. Not to be outdone, the chef at the local restaurant teaches Karen how to make the traditional Garlic Soup in time to serve it to a crowd of locals for lunch. In the process of learning a language, she becomes part of a wonderful French village. Locals who first acknowledged her with a nod, then a handshake, now greet her warmly with kisses on both cheeks. She has gained much more than a language
