1.1 This specification covers eight typical white metal bearing alloys, in bar or ingot form, known commercially as “ babbitt metal. ” The alloys are specified, covering the range commercially used, and are designated by the alloy numbers shown in Table 1. 1.2 The values stated in inch-pound units are to be regarded as standard.

Standard Specification for White Metal Bearing Alloys ...

Babbitt metal, also called white metal, is a soft, white non-ferrous alloy used to provide a bearing surface. It has properties that help reduce friction which make it a good material to use in a plain bearing. Babbitt was first created by Isaac Babbitt. Born July 26, 1799 in Taunton, Massachusetts, Babbitt was well known as an inventor by trade.
