It is often assumed that think tanks carry enormous weight with lawmakers and other key stakeholders. In Do Think Tanks Matter? Donald Abelson argues that the question of how think tanks have evolved and under what conditions they can and do have an impact continues to be ignored. Think tank directors often credit their institutes with influencing major policy debates and government legislation, and many journalists and scholars believe the explosion of think tanks since the latter part of the twentieth century is indicative of their growing importance in the policy-making process. Abelson goes beyond assumptions, highlighting both the visibility and relevance of public policy institutes in what has become a contentious and polarized political arena in the United States, and in Canada, where, despite recent growth in numbers, they enjoy less prominence than their US counterparts. By focusing on how think tanks engage in issue articulation, policy formation, and implementation, Abelson argues that they have helped to shape the political dialogue and the policy preferences and choices of decision-makers, but in different ways and at different stages of the policy cycle. This expanded and revised third edition includes additional institutional profiles of key think tanks, an updated chapter on presidents and think tanks, a new chapter on the efforts of a group of public policy institutes to shape the discourse around the possible construction of the controversial Keystone XL pipeline, and dozens of new graphs and tables that track the public visibility and perceived policy relevance or impact of top-tier think tanks.

The Yearbook Commercial Arbitration continues its longstanding commitment to serving as a primary resource for the international arbitration community with reporting on arbitral awards and court decisions applying the leading arbitration conventions, as well as on arbitration legislation and rules. Volume XL (2015) includes: • excerpts of arbitral awards made under the auspices of the International Chamber of Commerce (ICC) and the Paris International Arbitration Chamber (CAIP); • notes on new and amended arbitration rules, including references to their online publication; • notes on recent developments in arbitration law and practice in Andorra, Australia, Belarus, Brazil, Comoros, the Democratic Republic of the Congo, the Dubai International Financial Centre (DIFC), Latvia, Slovakia, the State of Palestine, Turkey and the United States; • excerpts of 68 court decisions applying the 1958 New York Convention from 24 countries – including, for the first time, cases from Anguilla, Belarus and Latvia – all indexed by subject matter and linked to the General Editor's published commentaries on the New York Convention; • an extensive Bibliography of recent books and journals on arbitration. The Yearbook is edited by the International Council for Commercial Arbitration (ICCA), the world's leading organization representing practitioners and academics in the field, with the assistance of the Permanent Court of Arbitration, The Hague. It is an essential tool for lawyers, business people and scholars involved in the practice and study of international arbitration.

Often when Native nations assert their treaty rights and sovereignty, they are confronted with a backlash from their neighbors, who are fearful of losing control of the natural resources. Yet, when both groups are faced with an outside threat to their common environment – such as mines, dams, or an oil pipeline – these communities have unexpectedly joined together to protect the resources. Some regions of the United States with the most intense conflicts were transformed into areas with the deepest cooperation between tribes and local farmers, ranchers, and fishers to defend sacred land and water. Unlikely Alliances explores this evolution from conflict to cooperation through place-based case studies in the Pacific Northwest, Great Basin, Northern Plains, and Great Lakes regions during the 1970s through the 2010s. These case studies suggest that a deep love of place can begin to overcome even the bitterest divides.

#1 Calgary Herald Bestseller An investigation of the history and demise of the most controversial North American energy infrastructure project. In 2015, President Barack Obama denied approval for TransCanada's Keystone XL pipeline, which would have carried crude oil from the Canadian oil sands to the U.S. Gulf Coast, providing great economic benefit to Canada. Over seven years of regulatory process, environmental activism, and media attention, the project had become infamous, a cause célèbre for North America's ENGO movement and a test of Obama's bona fides in the face of global climate change risk. As one of TransCanada's senior executive group, Dennis McConaghy provides an insider's perspective of Keystone XL's history and demise. How did this routine infrastructure acquire iconic status? Why couldn't government and industry find some accommodation to salvage the project? And most importantly, what must Canada learn from Keystone XL's demise? Can the country find common ground between economic value and credible carbon policy?

A declaration of resistance, and a roadmap for radical change, from the generation that will be most screwed by climate change. The Millennial generation could be first to experience the doomsday impacts of climate change. It's also the last generation able to do something about them. With time ticking down, 31-year-old journalist Geoff Dembicki journeyed to Silicon Valley, Canada's tar sands, Washington, DC, Wall Street and the Paris climate talks to find out if he should hope or despair. What he learned surprised him. Millions of people his age want to radically change our world, and they are at the forefront of resistance to the politicians and CEOs steering our planet towards disaster. In Are We Screwed?, Dembicki gives a firsthand account of this movement, and the shift in generational values behind it, through the stories of young people fighting for their survival. It begins with a student who abandons society to live in the rainforest and ends with a Muslim feminist fomenting a political revolution. We meet a Brooklyn artist terrifying the oil industry, a Norwegian scientist running across the melting Arctic and an indigenous filmmaker challenging the worldview of Mark Zuckerberg. Are We Screwed? makes a bold argument in these troubled times: A safer and more equitable future is more achievable than we've been led to believe. This book will forever change how you view the biggest existential challenge of our era and redefine the generation now battling against the odds to solve it.

In less than a decade, activism against the fossil fuel industry has exploded across the globe. While environmentalists used to focus on legislative goals, such as carbon emissions trading or renewable energy policies, today the most prominent activists directly attack the fossil fuel industry. This timely book offers a comprehensive evaluation of different types of activism, the success and impact of campaigns and activities, and suggestions as to ways forward. This book is the first systematic treatment of the anti-fossil fuel movement in the United States. An accessible and readable text, it is an essential reference for scholars, policymakers, activists, and citizens interested in climate change, fossil fuels, and environmental sustainability. The entire book or chapters from it can be used as required or supplementary material in various courses at the undergraduate and graduate level. As the book is not technically challenging but contains a comprehensive review of climate change, fossil fuels, and the literature on environmental activism, it can be used as an accessible introduction to the anti-fossil fuel campaign across disciplines.

Why has Portugal's vibrant and creative cinema industry not been more commercially successful?
